\* Results reporting less than 30 isolates may not be a reliable reflection of true susceptibility patterns. Not all isolates tested against every antibiotic listed

\* 10 (8.4%) of *E. coli* isolates and 5 (9.6%) of *Klebsiella* isolates were extended-spectrum  $\beta$ -lactamase (ESBL) producers

\* \* susceptibility reflects breakpoint for non-urine isolates. See urinary antibiogram for urine isolate susceptibilities
